## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 17 June 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 1 is objected to because of the following informalities: In line, 9, it appears "of" after "rejection", should be --if--. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 16 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim is directed at computer code or functional descriptive matter and not statutory subject matter.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, and 15 through 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eguchi, 5554969.
5. Eguchi discloses receiving a plurality of signals indicative of the rear steering angle, checking at least one of the plurality of signals to determine if it falls within a valid range, and correlating at least a first signal of the plurality of signals with at least a second signal of said plurality of signals to determine if either the first signal or the

second signal is invalid on lines 18-45, on column 1. Eguchi does not explicitly disclose the invention signals a rejection if any of the plurality of signals is found to be invalid. It would have been obvious to one of ordinary skill in the art at the time the invention was made to signal a rejection of an invalid signal because otherwise the invention would be useless. There would be no point in determining an invalid signal if nothing is done with that information.

***Allowable Subject Matter***

6. Claim 20 is allowed.
7. Claims 2 through 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
8. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not disclose signaling a rejection of any of the plurality of signals is found to be invalid, wherein the correlating includes comparing the first signal with an expected value at about and inflection point of the second signal; computing an expected value of the other of the first signal and second signal in accordance with the calculated angle; the plurality of signals comprises a plurality of signal components of a single carrier signal; the receiving includes a single sensor having two signal outputs; comparing at least one of the plurality of signals with both an upper and lower limit; and determining a second value of the steering angle in accordance with the first value of the steering value and the second signal in order to obtain a more accurate measurement.

***Response to Arguments***

9. Applicant's arguments with respect to claims 1, and 15 through 19, have been considered but are moot in view of the new ground(s) of rejection.

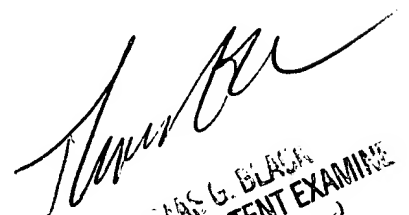

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Broadhead whose telephone number is 571-272-6957. The examiner can normally be reached on Monday through Friday.
